Quantum for Azure

Manage public cloud spend with precision

Quantum for Azure offers impressive visibility across your public cloud services.
This game-changing tool provides detailed usage data and enables you to track, monitor and cut cloud costs effectively.

Complete Visibility

- Your current **commit and consumption levels**
- **Commit balance** used and remaining
- Potential **saving opportunities**
- **ROI of Hybrid Benefits** and reserved instances
- Where to **optimise pay-as-you-go spend**
- Where to procure and apply **Reserved Capacity**
- Where **Windows** and **SQL licenses** can be applied
- **Cloud usage** by team, application and project
- **Opportunities to technically optimise** or right-size virtual machines

Benefits

- **Alignment of costs** with business stakeholders
- Effective **management of test, dev** and **production cloud costs**
- Visualise and identify **cost savings**
- Get the information needed to **modernise your cloud estate**
- In-depth cost management, **budgeting** and **forecasting**
- **Management of Hybrid Benefits** and reserved instances
- **Gain insights into unexpected cost increases** down to resource level

Key Features

- Uses **Microsoft Power BI** dashboards
- Data pulled from **Billing API** and directly from **Azure**
- Hosted in **Azure UK**
- **Secure portal** with AD for user authentication
- **Unlimited user accounts**
